## FULL-STACK SOFTWARE ENGINEER

Full-stack software engineer and Computer Science student returning to complete the final year of a Bachelor of Computer Science. Built and maintained a production multi-tenant operations platform using TypeScript, React, Node.js and PostgreSQL, with experience across RBAC, automated testing, CI/CD, mobile development and AI-assisted document-to-task workflows.

## EDUCATION

**Bachelor of Computer Science — RMIT University**  
2021–2025; returning to complete final year in 2027

## EXPERIENCE

**Freelance Full-Stack Engineer — Walker's Doughnuts**  
Melbourne, Australia | Aug 2025–Present

- Architected, built and maintain FriendChise, a production multi-tenant operations platform using TypeScript, React, Next.js, Node.js and PostgreSQL, used daily at a Walker's Doughnuts location.
- Worked directly with managers and frontline staff to translate operational problems into scheduling, task management, procedures, rostering, QR-menu and onboarding workflows.
- Designed server-side services and REST APIs with authentication, role-based access control, validation and organisation-scoped data access to enforce tenant isolation.
- Built FriendChise Mobile with React Native and Expo, integrating native OAuth, secure session persistence, camera/document capture and an AI-assisted Scan-to-Task workflow that converts photos and PDFs into structured task drafts for human review.
- Built automated testing and reliability workflows with Vitest, Playwright, GitHub Actions and Sentry, covering permissions, tenant boundaries, validation and critical application flows.
- Lead maintenance of FriendChise with contributions from 27 open-source developers, reviewing pull requests, coordinating GitHub Issues and maintaining codebase consistency.

**Warehouse Inventory Systems Consultant — Echt Apparel**  
Melbourne, Australia | Dec 2023

- Redesigned warehouse inventory tables and replenishment workflows, enabling one employee to complete work that previously required two while approximately doubling retrieval and stock-movement efficiency.
- Consolidated a three-table replenishment workflow into a single operational view and documented calculation logic, filtering rules and edge cases for the warehouse and WMS provider.
- Estimated a ~50% reduction in onboarding time and ~40% reduction in operational errors ahead of the peak Christmas trading period.

## SELECTED PROJECTS

**QA Wolf Technical Assessment — Automated Testing and Web Automation**

Jan 2026

- Built a Node.js and Playwright validator for the first 100 Hacker News "Newest" articles, using deterministic assertions, network-aware waits and diagnostic failure reporting.
- Advanced to QA Wolf's paid final-stage assessment and received A\$220 for completing the technical evaluation.

#### **DevTasks — Open-Source Developer Tool Suite**

Jun 2026

- Contributed merged pull requests to an open-source React/Vite developer tool, implementing reusable UI components and persistent client-side state management.
- Worked through maintainer review and repository conventions to integrate changes cleanly into an existing third-party codebase.

#### **FriendChise Mobile — React Native Frontline Operations App**

- Built a React Native/Expo application sharing FriendChise's organisation-scoped backend, authentication and task data across web and mobile.
- Implemented Scan-to-Task, combining camera/document capture with backend AI extraction to generate structured, editable task drafts from photos and PDFs.

## **TECHNICAL SKILLS**

- **Languages:** TypeScript, JavaScript, Java, Python
- **Frontend:** React, Next.js, React Native, Expo, HTML, CSS, Tailwind CSS
- **Backend and APIs:** Node.js, Prisma, REST APIs, server actions, Zod
- **Data:** PostgreSQL, MongoDB, Redis
- **Testing:** Vitest, Playwright, Jest, unit, integration and end-to-end testing
- **Cloud and DevOps:** Vercel, Docker, GitHub Actions, CI/CD, Sentry
- **Engineering:** Multi-tenant architecture, role-based access control, authentication, system design, code review, production monitoring, Git
- **Professional Development:** AWS Certified Solutions Architect – Associate (SAA-C03) — **In Progress**

## **ADDITIONAL ACHIEVEMENTS**

- Solved 200+ LeetCode problems covering algorithms and data structures.
- Completed HackerRank's React and TypeScript learning pathways and achieved its highest React rank.
