

Ivan Tran - FULL-STACK SOFTWARE ENGINEER

Melbourne, Australia | 0405 266 660 | mystoganx2001@gmail.com

LinkedIn: linkedin.com/in/ivan-tran-dev | GitHub: github.com/IvanTran-2001

Portfolio: ivantran-2001.github.io

EDUCATION

Bachelor of Computer Science — RMIT University

2021–2025; returning to complete final year in 2027

EXPERIENCE

AI Quality / Evaluation Contributor — Mercor

Remote | 2026–Present

- Review AI-generated slide outputs for structure, clarity, layout, and correctness, providing targeted feedback and prompts to improve subsequent generations.
- Collaborate with peers on ambiguous cases and apply reviewer feedback to maintain consistent quality standards.
- Completed Mercor's introductory AI agents course, with publicly verifiable credentials.

Freelance Full-Stack Engineer — Walker's Doughnuts

Melbourne, Australia | Aug 2025–Present

- Owned the end to end development and delivery of FriendChise, a production multi-tenant operations platform using TypeScript, React, Next.js, Node.js and PostgreSQL, used **daily by 6 staff** during active shifts.
- **Translated customer and frontline feedback** into product requirements and shipped features across scheduling, task management, procedures, rostering, QR menus and onboarding, centralising operational information during high-demand periods.
- **Designed organisation scoped backend services** and REST APIs with authentication, RBAC, validation and tenant isolation, enabling multiple locations and roles to securely share the same platform.
- Developed and shipped **FriendChise Mobile** with React Native and Expo, integrating OAuth, secure session persistence, camera/document capture and an AI-assisted Scan-to-Task workflow that converts real-world inputs into structured, editable task drafts.
- Manage **open-source contributions across 33 developers, completing 100+ pull-request reviews**, planning work through GitHub Issues and maintaining production code quality.

Warehouse Inventory Systems Consultant — Echt Apparel

Melbourne, Australia | Dec 2023

- Reduced a **2-person replenishment workflow to 1** operator by redesigning inventory tables and processes, while achieving an estimated **~2x improvement** in retrieval and stock-movement efficiency.
- Translated warehouse requirements into a single operational view, consolidating a three-table replenishment workflow and documenting calculation logic, filtering rules and edge cases for the warehouse owner and WMS provider.
- Reduced onboarding time by an estimated ~50% and operational errors by ~40% ahead of the **peak Christmas** trading period.

SELECTED PROJECTS

QA Wolf Technical Assessment — Automated Testing and Web Automation - Jan 2026

- Advanced to QA Wolf's paid final-stage assessment and **received A\$220** for completing the technical evaluation.

DevTasks — Open-Source Developer Tool Suite - Jun 2026

- Adapted implementations to maintainer feedback and repository conventions, ensuring clean integration with an existing third-party codebase.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, Java, Python
- **Frontend:** React, Next.js, React Native, Expo, HTML, CSS, Tailwind CSS
- **Backend & APIs:** Node.js, REST APIs, Prisma, server actions, Zod
- **Data:** PostgreSQL, MongoDB, Redis
- **Testing:** Vitest, Playwright, Jest, unit, integration and end-to-end testing
- **Cloud & DevOps:** Docker, GitHub Actions, CI/CD, Vercel, AWS Solutions Architect Associate (SAA-C03) **in progress**
- **Engineering:** End-to-end feature delivery, product development, multi-tenant architecture, RBAC, authentication, system design, code review, production monitoring, Git
- **AI Development:** GitHub Copilot, ChatGPT, Claude, CodeRabbit; AI-assisted planning, implementation, prompt refinement, code review and iterative development

ADDITIONAL ACHIEVEMENTS

- Solved **200+ LeetCode problems** covering algorithms and data structures.
